Unlocking Loan Insights | Cloud Data Analytics

Prepared for: TheLook Fintech Executive Team

TheLook Fintech

Overview

This project was completed as part of the Google Cloud Data Analytics Capstone. The goal was to help the Treasury department at TheLook Fintech understand important metrics such as cash flow, loan purpose, and borrower location.As part of this project, I created a report and an interactive dashboard using Looker. The analysis focused on the total number of loans issued and key metrics to track loan performance and support better decision-making.

Objective

🎯 **Target Goal #1:** Analyze the Fintech dataset to understand loan trends, including the total number of loans issued by day and year.

🎯 **Target Goal #2:** Build an interactive dashboard to help the Treasury team easily track important loan performance metrics.

🎯 **Impact:** Provides useful insights to support better lending decisions and Supports improving financial services based on customer needs

Next Steps

➔ Collect feedback from users about how easy the dashboard is to use and how helpful the insights are. Based on their feedback, make improvements to the dashboard design and features.

➔ Analyze the data to group borrowers based on their characteristics .This can help the company better understand different types of customers and improve their loan services and communication.

Results

- **The results of the data analysis demonstrate that the total number of loans has increased steadily from 2012 through 2019.**

Figure 1 – *Loan Count by Year 2012–2019*

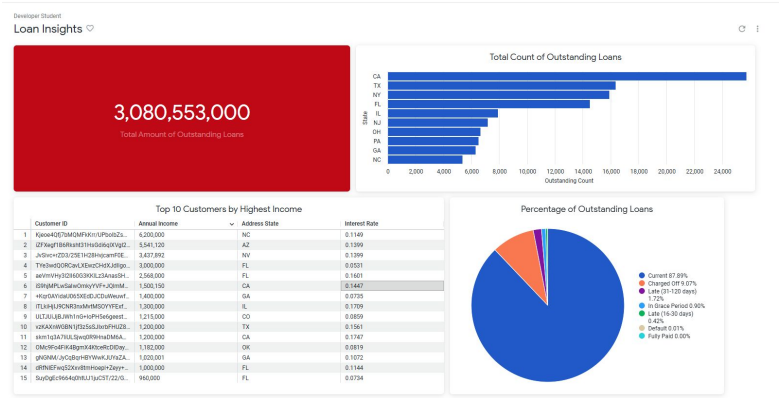
Table name: loan_count_by_year **Las**

issue_year	loan_count
2012	2594
2013	13460
2014	23453
2015	41919
2016	43368
2017	44435
2018	49333
2019	51737

Note: Table shows the total number of loans for each year from 2012–2019.

- **Data analysis reveals three key aspects of the loan portfolio—total outstanding balance, borrower locations, and homeowner income index—displayed on the interactive dashboard.**

Figure 2 – *Interactive Dashboard*



Note: Dashboard includes a single-value visualization, bar chart, table highlighting key metrics, and pie chart.
